

ACT 400 - The Data Detective Agency (continued)

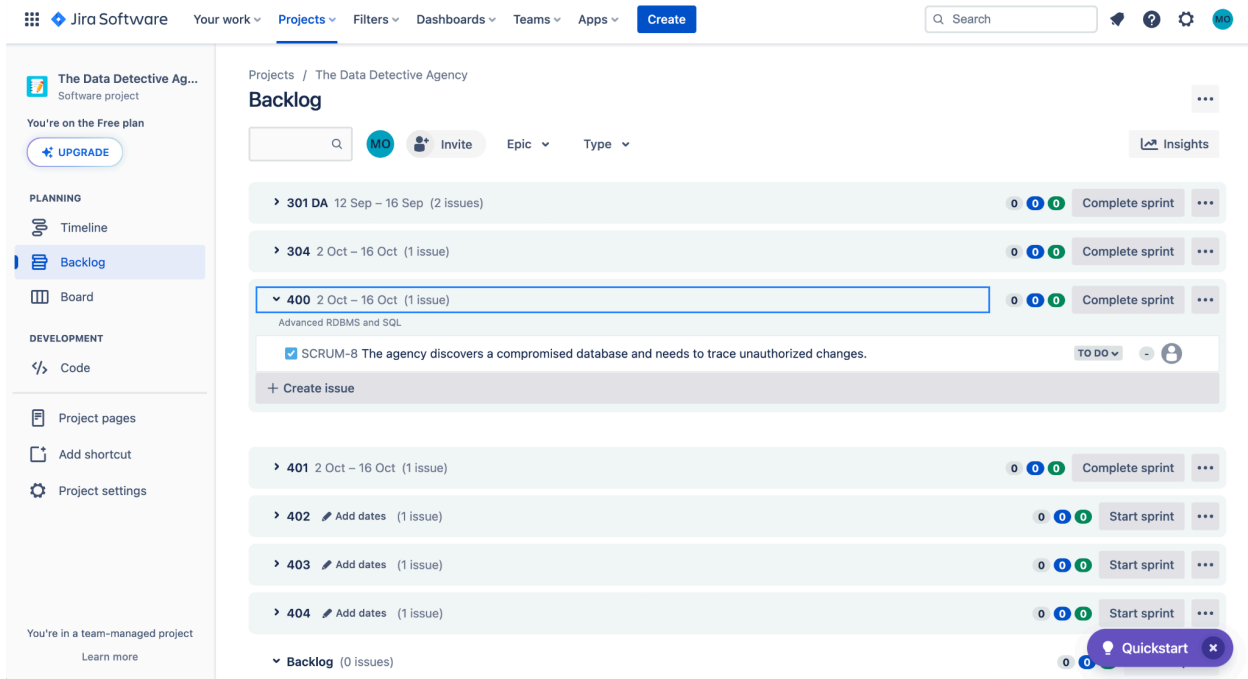

Version 1, 9/13/2023

Scenario and Instructions

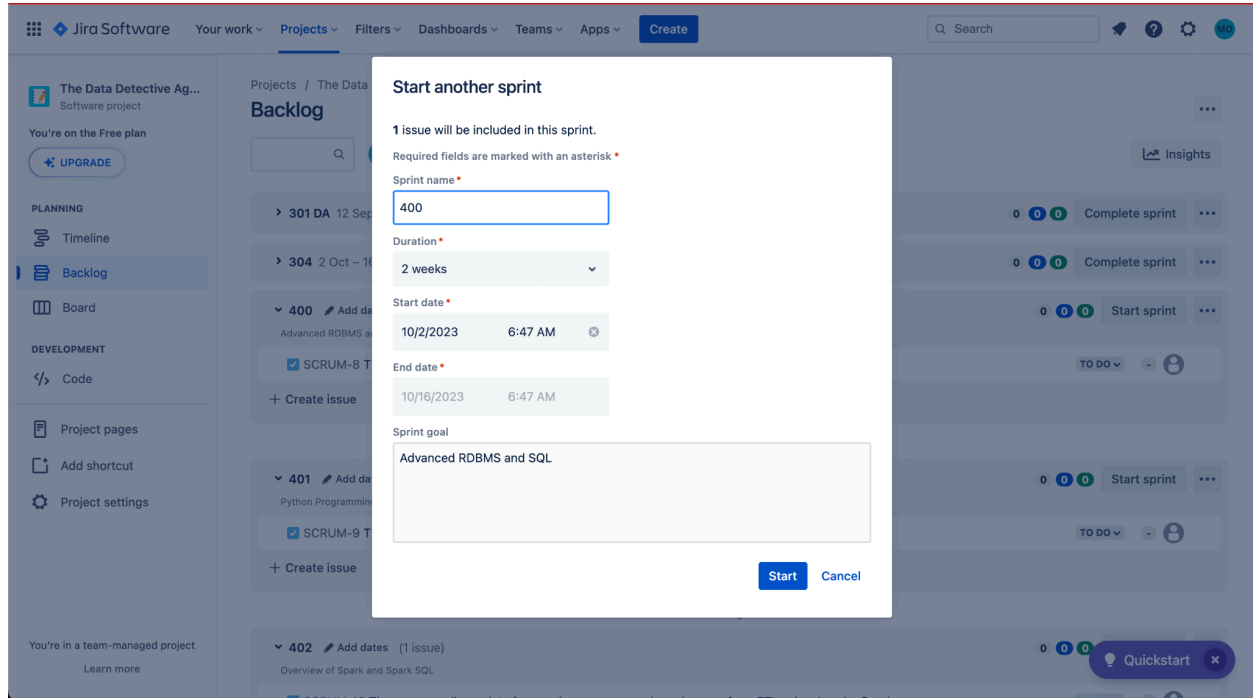

Step 1: In order to start the project, you should first sign up to the Jira.

Step 2: You should look for “The Data Detective Agency” project.

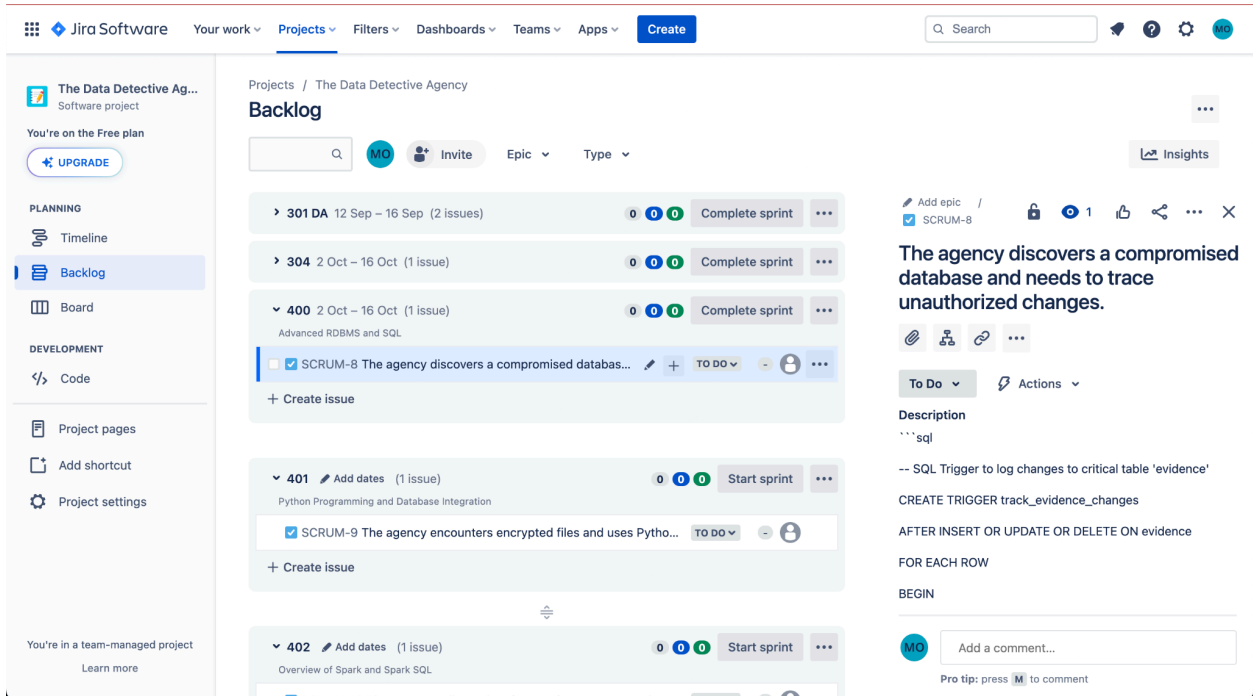

Step 3: After selecting the mentioned project, you will have to look under the “Planning” menu on the left sidebar, and select the “Backlog” tab. Go to Sprint 400 and click on the Start Sprint button.

Step 4: Select the duration of the Sprint for each module, as mentioned in the course outline. Start the Sprint after selecting the duration.

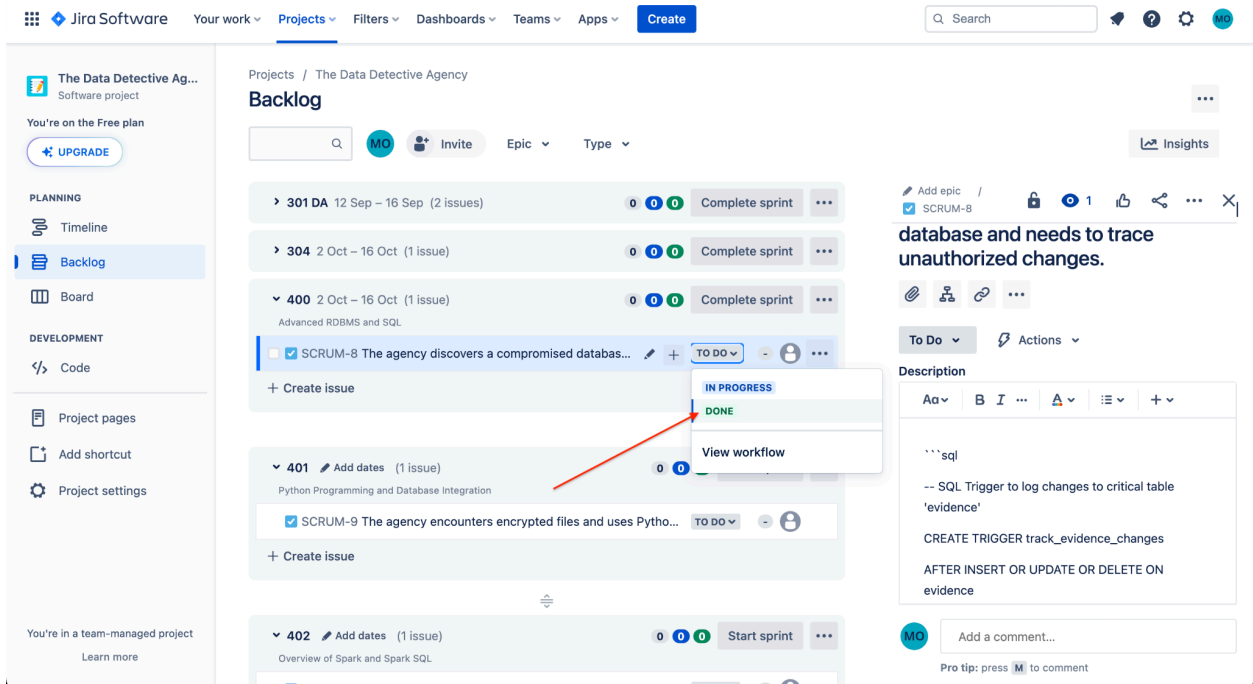

Step 5: Select the “SCRUM-8” under 400 Sprint to check the description. Now, execute the query to trigger the log changes to critical table 'evidence' as given in the description.

The screenshot shows the Jira Software interface for the 'The Data Detective Agency' project. The left sidebar contains navigation options like 'PLANNING', 'Backlog', 'Board', and 'DEVELOPMENT'. The main area displays a backlog of issues, with 'SCRUM-8' selected. The right sidebar shows the details for 'SCRUM-8', including its description and a 'To Do' button.

Step 6: After the task in Scrum 8 is completed, update the “To Do” and select the “Done” option as given in the picture below.

The screenshot shows the Jira Software interface for the 'The Data Detective Agency' project. The left sidebar contains navigation options like 'PLANNING', 'Backlog', 'Board', and 'DEVELOPMENT'. The main area displays a backlog of issues, with 'SCRUM-8' selected. A red arrow points to the 'To Do' button, which has a dropdown menu showing 'IN PROGRESS' and 'DONE' options.

Step 7: After Scrum 8 is completed, click on the “Complete Sprint” button on Sprint 400, as shown below.

The agency discovers a compromised database and needs to trace unauthorized changes.

The task involves responding to a compromised database by implementing a trigger, `track_evidence_changes`. This trigger is designed to trace unauthorized changes, activating after each insert, update, or delete operation on the "evidence" table.

For each affected row, it logs details such as evidence ID, the action type ('INSERT'), and the timestamp of the change in the "evidence_changes" table. This measure aims to enhance the agency's ability to monitor and trace unauthorized modifications in the event of a security breach.

Step 1: You will be needing a data set to continue with scrum - 8. You can directly download the dataset and import it in your SQL workbench from the link below.

https://drive.google.com/file/d/1ztS_3eZYS1vf1de8pbpE8u-bSUHtxFXw/view?usp=drive_link

Step 2: You can also create the database named "cap_evidence" and use the SQL queries given below to create the tables and insert values in the tables.

Step 2.1: Create evidence table:

```
CREATE TABLE evidence (  
  evidence_id INTEGER PRIMARY KEY,  
  description TEXT  
  -- Add other relevant columns as needed  
);
```

Step 2.2: Create evidence_changes table:

```
CREATE TABLE evidence_changes (  
  change_id INTEGER PRIMARY KEY AUTO_INCREMENT,  
  evidence_id INTEGER,  
  action VARCHAR(10),  
  change_date TIMESTAMP,  
  FOREIGN KEY (evidence_id) REFERENCES evidence (evidence_id)  
);
```

Step 2.3: Insert dummy data into evidence table:

```
INSERT INTO evidence (evidence_id, description) VALUES  
(1, 'Document A'),  
(2, 'Photograph B'),  
(3, 'Audio Recording C');
```

Step 2.4: Insert an example change to trigger the track_evidence_changes trigger:

```
INSERT INTO evidence (evidence_id, description) VALUES  
(4, 'Video Footage D');
```

Step 3: Once the database is created or the SQL is imported you can execute the query that is included in the Scrum-8's description in the Jira. The code to be executed is:

```
DELIMITER //  
  
CREATE TRIGGER track_evidence_changes  
AFTER INSERT ON evidence  
FOR EACH ROW  
BEGIN  
    INSERT INTO evidence_changes (evidence_id, action, change_date)  
    VALUES (NEW.evidence_id, 'INSERT', NOW());  
END;  
//  
  
-- Reset the delimiter  
DELIMITER ;
```

Step 4: [Capture the output and post it in the jira before closing out the sprint.](#)
